

28816 - Elasticity and Resistance of Materials

Información del Plan Docente

Academic Year	2017/18
Faculty / School	175 - Escuela Universitaria Politécnica de La Almunia
Degree	424 - Bachelor's Degree in Mechatronic Engineering
ECTS	6.0
Year	2
Semester	Second semester
Subject Type	Compulsory
Module	---

1.General information

1.1.Introduction

1.2.Recommendations to take this course

1.3.Context and importance of this course in the degree

1.4.Activities and key dates

2.Learning goals

2.1.Learning goals

2.2.Importance of learning goals

3.Aims of the course and competences

3.1.Aims of the course

3.2.Competences

4.Assessment (1st and 2nd call)

4.1.Assessment tasks (description of tasks, marking system and assessment criteria)

5.Methodology, learning tasks, syllabus and resources

5.1.Methodological overview

Strong interaction between the teacher/student. This interaction is brought into being through a division of work and responsibilities between the students and the teacher. Nevertheless, it must be taken into account that, to a certain degree, students can set their learning pace based on their own needs and availability, following the guidelines set by the teacher.

28816 - Elasticity and Resistance of Materials

The current subject (Elasticity and Strength of Materials) is conceived as a stand-alone combination of contents, yet organized into three fundamental and complementary forms, which are: the theoretical concepts of each teaching unit, the solving of problems or resolution of questions and laboratory work, at the same time supported by other activities

The organization of teaching will be carried out using the following steps:

– **Theory Classes** : Theoretical activities carried out mainly through exposition by the teacher, where the theoretical supports of the subject are displayed, highlighting the fundamental, structuring them in topics and or sections, interrelating them.

– **Practical Classes** : The teacher resolves practical problems or cases for demonstrative purposes. This type of teaching complements the theory shown in the lectures with practical aspects.

– **Laboratory Workshop** : Practical activities will be implemented in the computer room 1.1 simulation software structures (Wineva 7.0 and Abaqus.cae) with the presence and teacher mentoring .

– **Individual Tutorials** : Those carried out giving individual, personalized attention with a teacher from the department. Said tutorials may be in person or online.

5.2.Learning tasks

<p>Programmed learning activities</p>	<p>The programme offered to the student to help them achieve their target results is made up of the following activities...</p> <p>Involves the active participation of the student, in a way that the results achieved in the learning process are developed, not taking away from those already set out, the activities are the following:</p> <p>– Face-to-face generic activities :</p> <p>– Theory Classes : The theoretical concepts of the subject are explained and illustrative examples are developed as support to the theory when necessary.</p> <p>– Practical Classes : Problems and practical cases are carried out, complementary to the theoretical concepts studied.</p>
---------------------------------------	---

28816 - Elasticity and Resistance of Materials

	<p>• Laboratory Workshop : This work is tutored by a teacher, in groups of no more than 20 students.</p> <p>– Generic non-class activities :</p> <p>• Study and understanding of the theory taught in the lectures.</p> <p>• Understanding and assimilation of the problems and practical cases solved in the practical classes.</p> <p>• Preparation of seminars, solutions to proposed problems, etc.</p> <p>• Preparation of laboratory workshops, preparation of summaries and reports.</p> <p>• Preparation of the written tests for continuous assessment and final exams.</p> <p>The subject has 6 ECTS credits, which represents 150 hours of student work in the subject during the trimester, in other words, 10 hours per week for 15 weeks of class.</p> <p>A summary of a weekly timetable guide can be seen in the following table. These figures are obtained from the subject file in the Accreditation Report of the degree, taking into account the level of experimentation considered for the said subject is moderate.</p>
--	---

Activity	Weekly school hours
Lectures	3

Laboratory Workshop	1
Other Activities	6

5.3.Syllabus

Chapter 1: Introduction to Strength of Materials

Types of Structures, links and loads

Balance and GDH a Structure

Definition and types of internal efforts

Calculation and Representation Efforts diagrams

Chapter 2: Structure Design Rigid Knots

Laminating criteria: voltage Von- Mises.

Normal stress distribution in a section

Distribution of shear stress one section

Bending and Twisting problems in structures

Chapter 3: Structure Design Articulated Knots

Method for calculating knots structures

PTV method to calculate displacements

Buckling phenomenon

28816 - Elasticity and Resistance of Materials

Calculation of the truss structure

Chapter 4: Calculation of displacements in structures

Theorems Mohr (Gyre y Displacements)

Virtual work (Gyre y Displacements)

Flexibility Method for Structural Analysis Hyperstatic

Chapter 5: Deformable Solid Mechanics: Stress- Strain

Deformable Solid Mechanics

Kinematics of Solid Deformable

Dynamics of Deformable Solid

Ratio behavior

Thermo- elastic behavior

5.4.Course planning and calendar

weeks	WEEKLY PLANNING SEMESTER	
1 ^a 2 ^a	Topic 1	Exercise No. 1 Continuous Assessment
3 ^a		Exercise No. 2 Continuous

28816 - Elasticity and Resistance of Materials

4 ^a 5 ^a 6 ^a	Topic 2	Assessment 1st Practice with Wineva software (Topic 1 and 2) 1st Written Test (Topic 1 and 2)
7 ^a 8 ^a 9 ^a	Topic 3	Exercise No. 3 Continuous Assessment 2nd Practice with software Wineva (Topic 3) 2nd Written Test (Topic 3)

10 ^a 11 ^a 12 ^a	Topic 4	Exercise No. 4 Continuous Assessment 3rd practice with software Wineva (Topic 4) 3rd Written Test (Topic 4)
13 ^a 14 ^a 15 ^a	Topic 5	Exercise No. 5 Continuous Assessment 4th Practice with Abaqus software (Topic 5)

		4th Written Test (Topic 5)
--	--	----------------------------

5.5. Bibliography and recommended resources

Bibliography:

"THE UPDATED BIBLIOGRAPHY OF THE SUBJECT IS CONSULTED THROUGH THE LIBRARY'S WEB PAGE
