

Información del Plan Docente

Academic Year	2017/18
Faculty / School	229 - Facultad de Ciencias de la Salud y del Deporte
Degree	441 - Degree in Human Nutrition and Dietetics
ECTS	6.0
Year	1
Semester	First semester
Subject Type	Basic Education
Module	---

1.General information**1.1.Introduction****1.2.Recommendations to take this course****1.3.Context and importance of this course in the degree****1.4.Activities and key dates****2.Learning goals****2.1.Learning goals****2.2.Importance of learning goals****3.Aims of the course and competences****3.1.Aims of the course****3.2.Competences****4.Assessment (1st and 2nd call)****4.1.Assessment tasks (description of tasks, marking system and assessment criteria)****5.Methodology, learning tasks, syllabus and resources****5.1.Methodological overview**

The methodology followed in this course is oriented towards achievement of the learning objectives.

A wide range of teaching and learning tasks are implemented, such as lectures, seminars, computer-lab sessions, group work, work group (problem-solving activities through assignments), small group and individual tutorial meetings, virtual

tutorial meetings (email) and use of the virtual teaching platform (MOODLE).

Students are expected to participate actively in the class throughout the semester.

Classroom materials will be available via Moodle.

<https://moodle2.unizar.es/add/>

These include a repository of the lecture notes used in class, the course syllabus, as well as other learning resources.

Further information regarding the course will be provided on the first day of class.

5.2.Learning tasks

The course includes 6 ECTS organized according to:

- Lectures (1,44 ECTS): 36 hours.
- Practice sessions (0,56 ECTS): 15 hours.
- Computer-lab sessions (0,40 ECTS): 9 hours
- Autonomous work (3,40 ECTS): 84 hours.
- Assessment tasks (0,20 ECTS): (6 hours.

5.3.Syllabus

Lectures/seminars contents

- Introduction to Biostatistics. Scientific method.
- Univariate descriptive biostatistics. Frequency distribution. Tables and graphs. Measures of central tendency, spread, shape and position.
- Bivariate descriptive biostatistics. Two-way tables. Correlation and Regression.
- Probability theory. Bayes Theorem. Random variable and Probability distribution models.
- Introduction to inferential statistics. Sampling. Estimation by confidence interval. Sample size.
- Inferential statistics: Introduction to hypothesis testing, error types, significance level, power of the test, p values. Paired and independent samples.
- Hypothesis testing based on means, variances or proportions: Student' T , Z and Snedecor's F tests
- Non-parametric methods: chi-square test for independence. Mann-Whitney U test for ranked values.

Computer lab sessions contents: Use SPSS/Epidat and/or Excel to:

- Create a new database. Manage data and variables.
- Create univariate and bivariate frequency tables and graphs
- Perform correlation and regression techniques
- Perform two sample comparisons of means and create confidence intervals for the population mean differences
- Compare proportions among two independent populations

5.4.Course planning and calendar

For further details concerning the course timetable and classroom as well as official exam dates (time and classroom) please refer to the "Facultad de Ciencias de la Salud y del Deporte " website.
