

## 29828 - Industrial Automation

### Información del Plan Docente

<b>Academic Year</b>	2017/18
<b>Faculty / School</b>	110 - Escuela de Ingeniería y Arquitectura 326 - Escuela Universitaria Politécnica de Teruel
<b>Degree</b>	440 - Bachelor's Degree in Electronic and Automatic Engineering 444 - Bachelor's Degree in Electronic and Automatic Engineering
<b>ECTS</b>	6.0
<b>Year</b>	3
<b>Semester</b>	Second semester
<b>Subject Type</b>	Compulsory
<b>Module</b>	---

### **1.General information**

#### **1.1.Introduction**

#### **1.2.Recommendations to take this course**

#### **1.3.Context and importance of this course in the degree**

#### **1.4.Activities and key dates**

### **2.Learning goals**

#### **2.1.Learning goals**

#### **2.2.Importance of learning goals**

### **3.Aims of the course and competences**

#### **3.1.Aims of the course**

#### **3.2.Competences**

### **4.Assessment (1st and 2nd call)**

#### **4.1.Assessment tasks (description of tasks, marking system and assessment criteria)**

### **5.Methodology, learning tasks, syllabus and resources**

#### **5.1.Methodological overview**

The learning process that is designed for this subject is based on the following:

The teaching process will involve three main levels: lectures, problems and laboratory, with increasing

## 29828 - Industrial Automation

level of student participation.

\* In the lectures the theoretical basis of the automated systems will be presented, illustrated with numerous examples.

\* In the classes of problems and issues such cases will be developed involving students.

\* Laboratory practices will be developed in small groups where students perform the simulation, implementing and analysing real automation and control systems.

\* In addition, to encourage continuous and autonomous student work, additional learning activities to do throughout the semester will be performed.

### 5.2.Learning tasks

The program offered to the student for achieving the expected results includes the following activities ...

Class work: 2.4 ECTS (60 hours)

1) In-person class (type T1) (30 in-person hours).

Lectures of theoretical and practical content. The concepts and fundamentals of automatic systems are presented, illustrated with real examples. Student participation through questions and brief discussions will be encouraged.

2) Classes of problems and cases resolution (type T2) (15 in-person hours).

Problems and cases involving students, coordinated at all times with the theoretical contents will be developed. Students are encouraged to work the problems previously. Some of these hours may engage in learning activities assessable as specified in each course.

3) Lab (type T3) (15 in-person hours).

## 29828 - Industrial Automation

In practice the student will address issues specific of this subject from the practical point of view: Advanced programming automation systems, industrial communications, human-machine interfaces, supervision systems, PC based control, etc. That is, after the necessary phase of problem analysis and solution design, apply the theoretical concepts studied in the theoretical classes and problems, and put into practice on actual equipment, similar to that existing in the industry. The student will have a script of practice that must be prepared in advance. Each practice will be qualified in the laboratory.

Non-in-person work: 3.6 ECTS (90 hours)

4) Practical work (T6 type) (40 hours).

Activities that the student will perform alone or in groups and that the teacher will propose throughout the teaching period. In this course each student will work, in groups and individually, several evaluable activities.

5) Study (type T7) (46 non-in-person hours).

Student Personal study of the theoretical part and realization of problems. The ongoing work of the student will be encouraged by the homogeneous distribution of the various learning activities throughout the semester. This includes tutorials, as a direct support for the student, identification of learning problems, orientation in the subject, advising to exercises and assignments ...

6) Evaluation tests (T8) (4 in-person hours).

In addition to the qualifying function, evaluation is also a learning tool with which the student checks the degree of understanding and assimilation reached.

### 5.3.Syllabus

The contents developed are:

- Automation Technologies. Programmable logic controllers.
- Automation Technologies. Sensors and Actuators.

## 29828 - Industrial Automation

- PLC programming. Languages and implementation of formal models.
- The marches and stops modes study guide: Gemma.
- Operation and safety of the automation systems
- Introduction to Industrial Communications.
- Fieldbuses and Industrial Ethernet
- Supervision systems.
- Industrial Security.

Practices in EINA, Zaragoza:

- \* Basic implementation of Gemma
- \* Advanced Implementation of Gemma
- \* Industrial communications
- \* Terminals operation and dialogue
- \* Supervision Systems

Practices in EUP, Teruel:

- \* Basic implementation of Gemma
- \* Advanced Implementation Gemma
- \* Industrial communications
- \* Terminals operation and dialogue
- \* Supervision Systems

### 5.4.Course planning and calendar

Lectures and problem classes and practice sessions are held in the laboratory according to schedule set by the center (schedules available on their website).

Each teacher will inform its hours of tutoring.

The other activities will be planned depending on the number of students and will be announced in good time. It will be available on <http://moodle.unizar.es>
