1. General information
1.1. Introduction
1.2. Recommendations to take this course
1.3. Context and importance of this course in the degree
1.4. Activities and key dates
2. Learning goals
2.1. Learning goals
2.2. Importance of learning goals
3. Aims of the course and competences
3.1. Aims of the course
3.2. Competences
4. Assessment (1st and 2nd call)
4.1. Assessment tasks (description of tasks, marking system and assessment criteria)
5. Methodology, learning tasks, syllabus and resources
5.1. Methodological overview

The learning process designed for the subject combines the following elements:
(i) Theoretical-practical classes that allow to transmit knowledge to the student, encouraging their participation, in which practical cases will be solved and theory will be taught without there being an explicit separation between the two.

(ii) Personalized attention both in small groups and individualized in the tutorials.

Study and continuous personal work by the student since the beginning of the course.

All information and material related to the assignment is available on moodle2.unizar.es

5.2. Learning tasks
The program will be published on the Moodle platform. The credits of the subject are divided into:

- Classes (40 hours)
- Evaluation and intermediate assessments (5 hours)

5.3. Syllabus
Unit 1. Introduction to telecommunications systems.

Unit 2. Voice signals.

Unit 3. Wired transmission media.

Unit 4. Fiber optics.

Unit 5. Modulation and multiplexing.

Unit 6. Propagation of electromagnetic waves.

Unit 7. Telecommunications networks.

Unit 8. Generalities of the NBQ defense.

Unit 9. Nuclear risk.

Unit 10. Biological risk.

Unit 11. Chemical risk.

5.4. Course planning and calendar
The session planning and exam dates can be consulted on the official CUD
website: cud.unizar.es.

5.5 Bibliography and recommended resources

- Telecommunications Systems: Handouts and presentations on moodle2.unizar.es
- NBQ Defense: Handouts and presentations on moodle2.unizar.es
