

## 28713 - Hydraulic Engineering: the Basics

### Información del Plan Docente

<b>Academic Year</b>	2018/19
<b>Subject</b>	28713 - Hydraulic Engineering: the Basics
<b>Faculty / School</b>	175 - Escuela Universitaria Politécnica de La Almunia
<b>Degree</b>	423 - Bachelor's Degree in Civil Engineering
<b>ECTS</b>	6.0
<b>Year</b>	2
<b>Semester</b>	First semester
<b>Subject Type</b>	Compulsory
<b>Module</b>	---

### **1.General information**

#### **1.1.Aims of the course**

#### **1.2.Context and importance of this course in the degree**

#### **1.3.Recommendations to take this course**

### **2.Learning goals**

#### **2.1.Competences**

#### **2.2.Learning goals**

#### **2.3.Importance of learning goals**

### **3.Assessment (1st and 2nd call)**

#### **3.1.Assessment tasks (description of tasks, marking system and assessment criteria)**

### **4.Methodology, learning tasks, syllabus and resources**

#### **4.1.Methodological overview**

The learning process designed for this subject is based on the following:

- Strong interaction between the professor and the student. This interaction is brought into being through a division of work and responsibilities between the students and the teacher. Nevertheless, it must be taken into account that, to a certain degree, students can set their learning pace based on their own needs and availability, following the guidelines set by the professor.
- The current subject is conceived as a stand-alone combination of contents, yet organized into three fundamental and complementary forms, which are: the theoretical concepts of each teaching unit, the solving of problems or resolution of questions and laboratory work, at the same time supported by other activities.

The organization of teaching will be carried out using the following steps:

## 28713 - Hydraulic Engineering: the Basics

– **Theory Classes:** Theoretical activities carried out mainly through exposition by the professor, where the theoretical supports of the subject are displayed, highlighting the fundamental, structuring them in topics and or sections, interrelating them.

– **Practical Classes:** The professor resolves practical problems or cases for demonstrative purposes. This type of teaching complements the theory shown in the lectures with practical aspects.

– **Laboratory Workshop:** The lecture group is divided up into various groups, according to the number of registered students, but never with more than 5 students, in order to make up smaller sized groups.

– **Individual Tutorials:** Those carried out giving individual, personalized attention with a professor from the department. Said tutorials may be in person or online.

### 4.2.Learning tasks

The learning process is based on the following activities:

#### Face-to-face generic activities:

- **Theory Classes:** The theoretical concepts of the subject are explained and illustrative examples are developed as support to the theory when necessary.
- **Practical Classes:** Problems and practical cases are carried out, complementary to the theoretical concepts studied.
- **Laboratory Workshop:** This work is tutored by a professor, in groups of no more than 5 students.

#### Generic non-class activities:

- Study and understanding of the theory taught in the lectures.
- Understanding and assimilation of the problems and practical cases solved in the practical classes.
- Preparation of seminars, solutions to proposed problems, etc.
- Preparation of laboratory workshops, preparation of summaries and reports.
- Preparation of the written tests for continuous assessment and final exams.

The subject has 6 ECTS credits, which represents 150 hours of student work in the subject during the trimester, in other words, 10 hours per week for 15 weeks of class.

A summary of a weekly timetable guide can be seen in the following table. These data are obtained from the subject file in the Accreditation Report of the degree, taking into account the level of experimentation considered for the said subject is moderate.

Activity	Weekly school hours
Lectures	3
Laboratory Workshop	1

## 28713 - Hydraulic Engineering: the Basics

Other Activities

6

Nevertheless the previous table can be shown into greater detail, taking into account the following overall distribution:

&mdash; 44 hours of lectures, with 50% theoretical demonstration and 50% solving type problems.

&mdash; 10 hours of laboratory workshop, in 1 or 2 hour sessions.

&mdash; 4 hours of written assessment tests, two hours per test.

&mdash; 2 hours of PPT presentations.

&mdash; 90 hours of personal study, divided up over the 15 weeks of the 2nd semester.

### 4.3.Syllabus

#### Theory

Topic 1: Introduction to Hydraulic Engineering

Topic 2: Hydrostatic

Topic 3: Kinematics of fluids

Topic 4: Fluid dynamics

Topic 5: Hydraulic pumps and valves

Topic 6: Calculation of distribution network of pressured pipes

#### Practical contents

All the subjects mentioned in the previous section are related to exercises and laboratory experience.

Problems Topic 1

Problems on fluid compressibility

Problems Topic 2

Problems on hydrostatic systems, calculating the intensity and the location of hydrostatic force

Problems Topic 4

Problems on the fluid dynamics equation (conservation of mass, energy and momentum)

Problems Topic 5

Problems on hydraulic pumps, valves and cavitation

Problems Topic 6

Problems on pressure piping systems

Practice 1: Pressure gauges

Practice 2: Viscosity

Practice 3: Hydrostatic force on vertical and inclined gates

Practice 4: Osborne Reynolds apparatus for flow regime analysis

Practice 5: Study of Bernoulli equation and the concept of pressure loss through the Venturi tube

## **28713 - Hydraulic Engineering: the Basics**

### **4.4.Course planning and calendar**

#### **Scheduled sessions and presentation of works**

The dates of the two final exams will be published on the EUPLA official web page before the class period starting.

Other relevant dates regarding intermediate assessment and presentation of autonomous works and studies will be communicated by the professor the first day of the course and published on Moodle platform.

### **4.5.Bibliography and recommended resources**
