

## 28775 - Waste Management and Debugging Techniques. Hydrology

### Información del Plan Docente

<b>Academic Year</b>	2018/19
<b>Subject</b>	28775 - Waste Management and Debugging Techniques. Hydrology
<b>Faculty / School</b>	175 - Escuela Universitaria Politécnica de La Almunia
<b>Degree</b>	423 - Bachelor's Degree in Civil Engineering
<b>ECTS</b>	6.0
<b>Year</b>	4
<b>Semester</b>	Second semester
<b>Subject Type</b>	Optional
<b>Module</b>	---

### **1.General information**

#### **1.1.Aims of the course**

#### **1.2.Context and importance of this course in the degree**

#### **1.3.Recommendations to take this course**

### **2.Learning goals**

#### **2.1.Competences**

#### **2.2.Learning goals**

#### **2.3.Importance of learning goals**

### **3.Assessment (1st and 2nd call)**

#### **3.1.Assessment tasks (description of tasks, marking system and assessment criteria)**

### **4.Methodology, learning tasks, syllabus and resources**

#### **4.1.Methodological overview**

The learning process designed for this subject is based on the following:

Strong interaction between the teacher/student. This interaction is brought into being through a division of work and responsibilities between the students and the teacher. Nevertheless, it must be taken into account that, to a certain degree, students can set their learning pace based on their own needs and availability, following the guidelines set by the teacher.

The current subject is conceived as a stand-alone combination of contents, yet organized into three fundamental and complementary forms, which are: the theoretical concepts of each teaching unit, the solving of problems or resolution of

## 28775 - Waste Management and Debugging Techniques. Hydrology

questions and laboratory work, at the same time supported by other activities

The organization of teaching will be carried out using the following steps:

**Theory Classes:** Theoretical activities carried out mainly through exposition by the teacher, where the theoretical supports of the subject are displayed, highlighting the fundamental, structuring them in topics and or sections, interrelating them.

**Practical Classes:** The teacher resolves practical problems or cases for demonstrative purposes. This type of teaching complements the theory shown in the lectures with practical aspects.

**Laboratory Workshop:** The lecture group is divided up into various groups, according to the number of registered students, but never with more than 20 students, in order to make up smaller sized groups.

**Individual Tutorials:** Those carried out giving individual, personalized attention with a teacher from the department. Said tutorials may be in person or online.

### 4.2.Learning tasks

The programme offered to the student to help them achieve their target results is made up of the following activities...

Involves the active participation of the student, in a way that the results achieved in the learning process are developed, not taking away from those already set out, the activities are the following:

&mdash; **Face-to-face generic activities:**

&#9679; **Theory Classes:** The theoretical concepts of the subject are explained and illustrative examples are developed as support to the theory when necessary.

&#9679; **Practical Classes:** Problems and practical cases are carried out, complementary to the theoretical concepts studied.

&#9679; **Laboratory Workshop:** This work is tutored by a teacher, in groups of no more than 20 students.

&mdash; **Generic non-class activities:**

&#9679; Study and understanding of the theory taught in the lectures.

&#9679; Understanding and assimilation of the problems and practical cases solved in the practical classes.

&#9679; Preparation of seminars, solutions to proposed problems, etc.

&#9679; Preparation of laboratory workshops, preparation of summaries and reports.

## 28775 - Waste Management and Debugging Techniques. Hydrology

• Preparation of the written tests for continuous assessment and final exams.

The subject has 6 ECTS credits, which represents 150 hours of student work in the subject during the trimester, in other words, 10 hours per week for 15 weeks of class.

A summary of a weekly timetable guide can be seen in the following table. These figures are obtained from the subject file in the Accreditation Report of the degree, taking into account the level of experimentation considered for the said subject is moderate.

Activity	Weekly school hours
Lectures	3
Laboratory Workshop	1
Other Activities	6

Nevertheless the previous table can be shown into greater detail, taking into account the following overall distribution:

– 40 hours of lectures, with 50% theoretical demonstration and 50% solving type problems.

– 10 hours of laboratory workshop, in 1 or 2 hour sessions.

– 6 hours of written assessment tests, one hour per test.

– 4 hours of PPT presentations.

– 90 hours of personal study, divided up over the 15 weeks of the 2nd semester.

There is a tutorial calendar timetable set by the teacher that can be requested by the students who want a tutorial.

### 4.3.Syllabus

The syllabus of the course is developed around the following thematic blocks:

#### Topic 1

Introduction

1.1. Definitions and Terminology

1.2. Minimization

1.3. Recovery or recovery

1.4. Safe treatment. Destruction

1.5. Deposition

#### Topic 2

Generation and waste management

## 28775 - Waste Management and Debugging Techniques. Hydrology

- 2.1. Law regulating waste in Spain
- 2.2. European Waste Catalogue
- 2.3. Generation and waste management in Aragón
- 2.4. Manual industrial waste management in Aragón and management systems
- 2.5.-Management packages

### Topic 3

- 3.1. Energy recovery systems
- 3.2. energy content of waste
- 3.3. Environmental impact
- 3.4. Energy Recovery Systems
- 3.5 Legislation

### Topic 4

Biological treatments: anaerobic digestion

- 4.1. Introduction to biological treatments
- 4.2. Anaerobic digestion process
- 4.3. Digestion products methanogenic
- 4.4. Types of reactors for anaerobic digestion

### Topic 5

Biological treatment: Composting

- 5.1. Introduction
- 5.2. Process conditions
- 5.3. Transformations during composting
- 5.4. Variation of physico-chemical parameters throughout treatment
- 5.5 Parts of a composting plant
- 5.6. Materials and out of a composting plant
- 5.7. Previous calculations.

### Topic 6

Demolition and construction waste.

- 6.1 Types of waste
- 6.2.- Management RCD's

### Topic 7

Separation and recovery of materials

- 7.1. Separation technologies solids
- 7.2. Solid-liquid separation technologies.
- 7.3. Valorization of various materials

## 2. PRACTICAL CONTENTS.

Each topic discussed in the previous section, carries associated practical exercises on real cases of application in several companies: engineering, industry and the free exercise of the profession.

### 4.4.Course planning and calendar

The planning orientation shown below

&mdash; **Week 1 and 2:** Topic 1.

&mdash; **Week 3, 4 and 5:** Topic 2.

&mdash; **Week 6, 7 and 8 :** Topic 3.

&mdash; **Week 9 and 10:** Topic 4.

&mdash; **Week 11 and 12:** Topic 5.

## 28775 - Waste Management and Debugging Techniques. Hydrology

&mdash; **Week 13:** Topic 6.

&mdash; **Week 14 and 15:** Topic 7.
