

28833 - Mechatronic Systems: Design and Maintenance

Información del Plan Docente

Academic Year	2018/19
Subject	28833 - Mechatronic Systems: Design and Maintenance
Faculty / School	175 - Escuela Universitaria Politécnica de La Almunia
Degree	424 - Bachelor's Degree in Mechatronic Engineering
ECTS	6.0
Year	4
Semester	First semester
Subject Type	Compulsory
Module	---

1.General information

1.1.Aims of the course

1.2.Context and importance of this course in the degree

1.3.Recommendations to take this course

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

The learning process designed for this subject is based on the following:

In a strong teacher / student interaction. This interaction is materialized through a distribution of work and responsibilities between students and teachers. However, it will have to be taken into account that to a certain extent students can mark their learning pace according to their needs and availability, following the guidelines set by the teacher. The present subject of Electrical Engineering is conceived as a unique set of contents, but worked under three fundamental and complementary forms as they are: the theoretical concepts of each didactic unit, the resolution of problems or questions and the laboratory practices, supported in turn For another series of activities. The organization of the teaching will be

28833 - Mechatronic Systems: Design and Maintenance

carried out following the following guidelines:

– **Theory Classes:** Theoretical activities carried out mainly through exposition by the teacher, where the theoretical supports of the subject are displayed, highlighting the fundamental, structuring them in topics and or sections, interrelating them.

– **Practical Classes:** The teacher resolves practical problems or cases for demonstrative purposes. This type of teaching complements the theory shown in the lectures with practical aspects.

– **Laboratory Workshop:** The lecture group is divided up into various groups, according to the number of registered students, in order to make up smaller sized groups.

– **Group Tutorials:** Programmed activities of learning follow-up in which the teacher meets with a group of students to guide their work of autonomous learning and supervision of works directed or requiring a very high degree of advice by the teacher.

– **Individual Tutorials:** Those carried out giving individual, personalized attention with a teacher from the department. Said tutorials may be in person or online.

4.2.Learning tasks

The programme offered to the student to help them achieve their target results is made up of the following activities...

Involves the active participation of the student, in a way that the results achieved in the learning process are developed, not taking away from those already set out, the activities are the following:

– **Face-to-face generic activities:**

• Theory Classes: The theoretical concepts of the subject are explained and illustrative examples are developed as support to the theory when necessary.

• Practical Classes: Problems and practical cases are carried out, complementary to the theoretical concepts studied.

• Laboratory Workshop: This work is tutored by a teacher, in groups of students.

– **Generic non-class activities:**

• Study and understanding of the theory taught in the lectures.

• Understanding and assimilation of the problems and practical cases solved in the practical classes.

28833 - Mechatronic Systems: Design and Maintenance

• Preparation of seminars, solutions to proposed problems, etc.

• Preparation of laboratory workshops, preparation of summaries and reports.

• Preparation of the written tests for continuous assessment and final exams.

- **Tutored autonomous activities.**

Although they will have more of a face character have been taken into account in part for their idiosyncrasies, they will be primarily focused on seminars and tutorials under the supervision of the teacher.

- **Reinforcement activities.**

Non-contact marking character, through a virtual learning portal (Moodle) various activities that reinforce the basic contents of the subject be addressed. These activities can be customized or not, controlling their realization through it.

4.3.Syllabus

The subject is structured around two complementary components contents:

- Theorists.
- Practical.

THEORETICAL CONTENTS.

The theoretical contents are articulated based on a series of didactic units, attached relationship, indivisible blocks of treatment, given the configuration of the subject that is programmed. These topics cover the contents necessary for the acquisition of predetermined learning outcomes.

- TOPIC 1: Design of mechatronic systems.
- TOPIC 2: Maintenance of mechatronic systems.
- TOPIC 3: Security of mechatronic systems.

PRACTICAL CONTENTS.

Its aim is none other than to be covered learning outcomes of the course through a program of laboratory practices, encompassing aspects related to the following issues:

- Work With the tools, techniques and methods necessary involved in the design process of mechatronic systems from

28833 - Mechatronic Systems: Design and Maintenance

initial design to manufacturing planning.

- Apply The most common when planning a typology of maintenance methodologies, based on situations and analysis of results.

- Basic Notions of implementing security features in mechatronic systems.

The laboratory workshop practices to be developed by the student will be conducted in sessions of two hours.

4.4.Course planning and calendar

The subject has 6 ECTS credits, which represents 150 hours of student work in the subject during the trimester, in other words, 10 hours per week for 15 weeks of class.

A summary of a weekly timetable guide can be seen in the following table. These figures are obtained from the subject file in the Accreditation Report of the degree, taking into account the level of experimentation considered for the said subject is high.

Activity	Weekly school hours
Lectures	2
Laboratory	2
Others activities	6

Nevertheless the previous table can be shown into greater detail, taking into account the following overall distribution:

— 28 hours of lectures, with 50% theoretical demonstration and 50% solving type problems.

— 28 hours of laboratory workshop, in 1 or 2 hour sessions.

— 4 hours of written assessment tests, one or two hour per test.

— 90 hours of personal study, divided up over the 15 weeks of the semester.

Written continuous assessment tests are related to the following topics:

28833 - Mechatronic Systems: Design and Maintenance

— **Written assessment test 1:** Topics 2.

— **Written assessment test 2:** Topics 3.

The most significant dates of the continuous evaluation system will be published in moodle during the development of the course.

The dates of the global evaluation test will be those published officially on the School website.

The weekly schedule of the subject will be published officially on the School website.

4.5. Bibliography and recommended resources

Resources and materials used in the development of the subject are reflected in the following table:

Material	Format
Topic theory notes Topic problems	Paper/repository
Topic theory notes Topic presentationso Topic problems Related links	Digital/Moodle E-Mail
Software	Pc's laboratorio
Technical manuals	Paper/repository Digital/Moodle
Labware	

28833 - Mechatronic Systems: Design and Maintenance
