

Year : 2018/19

## **30231 - Automatic Learning**

### **Syllabus Information**

<b>Academic Year:</b>	2018/19
<b>Subject:</b>	30231 - Automatic Learning
<b>Faculty / School:</b>	110 -
<b>Degree:</b>	439 - Bachelor's Degree in Informatics Engineering
<b>ECTS:</b>	6.0
<b>Year:</b>	3
<b>Semester:</b>	Indeterminate
<b>Subject Type:</b>	
<b>Module:</b>	---

### **General information**

#### **Aims of the course**

#### **Context and importance of this course in the degree**

#### **Recommendations to take this course**

#### **Learning goals**

#### **Competences**

#### **Learning goals**

#### **Importance of learning goals**

#### **Assessment (1st and 2nd call)**

#### **Assessment tasks (description of tasks, marking system and assessment criteria)**

#### **Methodology, learning tasks, syllabus and resources**

#### **Methodological overview**

The learning process is based on the teachers' lectures, and the students' work during the practical sessions. In both cases, previous personal work is essential. Before each lecture, students should study and understand previous lectures. Before each practical session, students should analyse the assignment, perform some preliminary work, and identify the parts that require further clarifications from the teacher. At the end of each practical sessions, students should present the results obtained.

## Learning tasks

The average students' work required for this course is 150 hours:

- Lectures (type T1) (30 hours).
- Practical sessions (type T3) (30 hours).
- Personal work (type T7) (80 hours).
- Examinations (type T8) (10 hours).

## Syllabus

1. Supervised Learning. Regression
2. Regularization and model selection
3. Logistic regression
4. Generative models. Naive Bayes
5. Anomaly Detection
6. Non supervised learning. PCA
7. Clustering
8. Recommender systems
9. Non parametric methods. Gaussian processes
10. Big Data

## Course planning and calendar

## Bibliography and recommended resources
