4.1.Methodological overview

The methodology followed in this course is oriented towards achievement of the learning objectives. It is an active methodology that encourages class attendance, student participation and continuous work (students must submit their assignments within the deadlines).

The teacher will make a theoretical introduction (lecture) supported by images, and a list of reference sources that students must consult. The structure of the teacher's assignment proposals will be the following, which later the students will adapt to their interests, expectations and personal criteria:

- **Proposal > information > development > analysis**

Each student must make one or more two dimensional and three dimensional sketches before their final assignment (autonomous student work, supervised in the classroom by the teacher). The student should conceive the course as a comprehensive learning process, from the teacher's proposals until the final elaboration of the assignments. When students submit sketches, notes, reflections, bibliography, images and other elements, they will include them in a final report/portfolio (DIN A4 format) for evaluation at the end of the course. Once completed the exercise, each student must presents their exercise to the rest of students (presentation and individual defense). Projects done in groups will also be presented and defended. The students have to develop the ability to communicate, explain in an orderly and consistent manner, favoring discussion and critical thinking in the class.

Students are encouraged to visit exhibitions, artists' studios, art fairs, etc. and they must submit a report or personal summary of these activities.
