

## 26421 - Micropalaeontology

### Syllabus Information

**Academic Year:** 2019/20

**Subject:** 26421 - Micropalaeontology

**Faculty / School:** 100 - Facultad de Ciencias

**Degree:** 296 - Degree in Geology  
588 - Degree in Geology

**ECTS:** 6.0

**Year:** 3

**Semester:** Second semester

**Subject Type:** Compulsory

**Module:** ---

### 1.General information

#### 1.1.Aims of the course

#### 1.2.Context and importance of this course in the degree

#### 1.3.Recommendations to take this course

### 2.Learning goals

#### 2.1.Competences

#### 2.2.Learning goals

#### 2.3.Importance of learning goals

### 3.Assessment (1st and 2nd call)

#### 3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

### 4.Methodology, learning tasks, syllabus and resources

#### 4.1.Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. A wide range of teaching and learning tasks are implemented, such as lectures, laboratory sessions, fieldwork and autonomous work and study. Students will learn and practice the micropaleontological techniques. The most relevant microfossil groups in applied micropaleontology will be studied and interpreted in terms of evolution, biostratigraphy and paleoenvironmental, paleoclimatic and paleoceanographic reconstruction. Introduction to the scientific research by means of the study of a micropaleontological sample.

#### 4.2.Learning tasks

This 6 ECTS course is organized as follows:

- Lectures (25 hours). Two weekly hours. Students are expected to participate actively in class.
- Laboratory sessions (31 hours). 2.5 weekly hours. It involves the study of a micropaleontological sample for the practical assignment.
- Fieldwork (0.4 ECTS: 4 hours). At Arguis-Monrepós, Huesca.
- Exam (4 hours).
- Autonomous work and study (86 hours). It comprises the study of theory and the completion of the practical assignment.

## 4.3.Syllabus

This course will address the following topics:

### Lectures

#### Section I: Fundamentals of the Micropaleontology

- Topic 1. Concept, history and methods of the Micropaleontology.
- Topic 2. Taphonomy and micropaleontological classification.

#### Section II: Main micropaleontological groups

- Topic 3. Foraminifers (biological introduction and organization of the shell).
- Topic 4. Planktic Foraminifera (Globigerinina).
- Topic 5. Small benthic foraminifera of Lagenina and Rotaliina.
- Topic 6. Large benthic foraminifera of Rotaliina and Miliolina.
- Topic 7. Small and large benthic foraminifera of Fusulinina and Textulariina.
- Topic 8. Radiolaria
- Topic 9. Tintinnids and calcareous nannofossils (coccolithophorids).
- Topic 10. Diatoms and silicoflagellates
- Topic 11. Dinoflagellates, acritarchs, quaternary, and calcareous algae.
- Topic 12. Bryozoa and ostracods.
- Topic 13. Other microfossils of protists and invertebrates.
- Topic 14. Conodonts and other microfossils of vertebrates.

#### Section III: Applications of the Micropaleontology

- Topic 15. Paleocology and paleoenvironmental reconstruction using microfossils.
- Topic 16. Paleoclimatology using microfossils.
- Topic 17. Paleooceanography using microfossils.
- Topic 18. Paleobiogeography using microfossils.
- Topic 19. Biostratigraphy. Limits and advantages of microfossils.
- Topic 20. Methods of stratigraphic correlation using microfossils.
- Topic 21. Evolutionary paleobiology using microfossils (evolution and extinction).
- Topic 22. Reconstruction of paleobiological, paleoclimatic and paleooceanographic events using microfossils.
- Topic 23. Origin and history of the life during the Precambrian through microfossils. Astrobiology using microfossils.
- Topic 24. Analysis of microfossils (solving of case studies).
- Topic 25. Solving of problems and case studies with microfossils.

### Laboratory sessions

Learning and training in the micropaleontological techniques. Identification of the most useful microfossils and their application to the solution of biostratigraphic, paleoecological and evolutive problems. Study of a micropaleontological sample, as practice individual research, during the second half of each practical session.

Session 1. Microfossils. Basic paleoecology, taphonomy and biostratigraphy.

Session 2. Planktic foraminifera. Basic paleoclimatology.

Session 3. Lagenina and Rotaliina. Basic paleoenvironmental reconstruction.

Session 4. Miliolina, Fusulinina and Textulariina.

Session 5. Analysis of microfossils.

Session 6. Laboratory methods. Delivery of micropaleontological sample.

Session 7. Micro- and nannofossils of protists (calcareous, siliceous and organic).

Session 8. Ostracods, bryozoa and other invertebrate microfossils.

Session 9. Conodonts and vertebrate microfossils.  
Session 10. Study of micropaleontological sample.  
Session 11. Study of micropaleontological sample.  
Session 12. Study of micropaleontological sample.

#### **Fieldwork**

Field trip to Arguis-Monrepós (Huesca)

#### **4.4.Course planning and calendar**

This course is a second semester course. Classes will start the first academic week and will last for 13 weeks.

- Lectures: Mondays and Tuesdays from 12 to 1pm.

- Laboratory sessions: Tuesdays from 3.30pm to 6pm and from 6pm to 8.30pm and Wednesdays from 12 to 2.30pm.

-Further information concerning the timetable, classroom, office hours, assessment dates and other details regarding this course will be provided on the first day of class or please refer to the Faculty of Sciences and Earth Sciences Department websites (<https://ciencias.unizar.es>, <https://cienciatierra.unizar.es>) and Moodle.

#### **4.5.Bibliography and recommended resources**
