

28956 - Agricultural chemical analysis

Syllabus Information

Academic Year: 2019/20

Subject: 28956 - Agricultural chemical analysis

Faculty / School: 201 - Escuela Politécnica Superior

Degree: 437 - Degree in Rural and Agri-Food Engineering
583 - Degree in Rural and Agri-Food Engineering

ECTS: 6.0

Year: 4

Semester: Second semester

Subject Type: Optional

Module: ---

1.General information

1.1.Aims of the course

1.2.Context and importance of this course in the degree

1.3.Recommendations to take this course

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

Since the subject is theoretical/practical, the proposed methodology includes classroom lectures complemented by sessions of laboratory practices, where the student will apply the basic knowledge about the main tools of chemical analysis applied to agricultural samples. The lectures are reinforced with solving sessions of various types of numerical problems or exercises.

For better monitoring of the learning process, they will be presented to the student a series of questionnaires or exercises throughout the semester and will encourage the student to use the tutorial hours.

In support, it is posted on the Web (Moodle platform) Basic reference materials as the course syllabus, class presentations of theoretical issues, scripts complementary practices or different material.

4.2.Learning tasks

The course includes the following learning tasks:

- 1- Lectures (20 hours) that consist of lectures aimed at students to acquire theoretical knowledge and basic principles of Chemical Analysis. Classes will be held interactively with students, discussing with them the aspects that are more difficult or especially interesting for each topic. "Case studies" that allow students to consolidate the theoretical concepts and establish the applicability of chemical analysis in solving problems agrifood be presented.
- 2- Solving-problems sessions (10 hours) for the determination of chemical species in agrifood matrices (soil, water, plants, fertilizers, food) that will be inserted in the calendar as progress is made in the content of the subject to be
