4.1.Methodological overview

The program that the student is offered to help you achieve the expected results includes the following activities . Theory session, the aim of this method is to provide condensed information adapted to the level of the student. By performing in each of the themes of a work of selection of the most important aspects for the student, analysis and synthesis of information coming from different sources; usually inaccessible to him. With this work which aims to facilitate the understanding of the main concepts of the subject and a critical assessment of each of the subjects exerted by the teacher as a result of the knowledge gained in the study and through professional experience and also by students from their own perspective. To facilitate the presentation of topics auxiliary resources Power-point presentations are used. Since the use of these resources the student avoids the time-consuming tasks of copying. In addition, it can be highly positive in order to expedite the exhibition, provided the projected material accessible to the student for further detailed study.

Practice sessions and seminar sare held reasonably coordinated with those of theory. The exercises are representative of the issues, varied and training. Certain exercises can be used to develop new aspects of knowledge that have not been subject to previous explanations. Students should try to resolve the issues in their opinion, addressing the difficulties of each one before explaining its decision. This allows them to build their own learning in a context that approaches them to reality. The teacher's role will be to guide and moderator. Tutorials They aim to resolve any doubts that may have the student during the study of the subject, as well as orient and guide the student conducting case studies and documents to be mad
