

30253 - Data Warehouses and Data Mining

Syllabus Information

Academic Year: 2019/20

Subject: 30253 - Data Warehouses and Data Mining

Faculty / School: 110 - Escuela de Ingeniería y Arquitectura
326 - Escuela Universitaria Politécnica de Teruel

Degree: 443 - Bachelor's Degree in Informatics Engineering
439 - Bachelor's Degree in Informatics Engineering

ECTS: 6.0

Year: 4

Semester: 439 - First semester

439 - First semester

439 - First semester

439 - First semester

439 - First semester

439 - First semester

443 - First semester

443 - First semester

443 - First semester

443 - First semester

Subject Type: ---

Module: ---

1.General information

1.1.Aims of the course

1.2.Context and importance of this course in the degree

1.3.Recommendations to take this course

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. A wide range of teaching and learning tasks are implemented such as:

- The presentation of contents by the professors, and the resolution of exercises in class.
- The personal study by the students and their participation in class in solving exercises.
- The completion of practical assignments by the students, oriented by the professors, who will develop the theoretical knowledge acquired.

- The development and defence of practical assignments in groups, oriented by the professors.
- The personalized attention to the student, through tutoring, with the goal of revising and discussing materials and topics presented in class.

It must be taken into account that, although the course has a practical orientation, acquiring the needed theoretical knowledge is also required. Therefore, the learning process emphasizes both the theoretical concepts and the individualized-study as well as the development of practical work.

4.2.Learning tasks

The course includes the following learning tasks:

- Lectures, in which the program of the course will be developed.
- Problem-solving sessions, in which problems and exercises will be solved, and activities related to the reading and discussion of relevant texts may be performed.
- Laboratory sessions will be developed in a computer lab. In those sessions, the students will perform practical assignments related to the course.

4.3.Syllabus

The course will address the following topics:

1. Introduction to data warehouses:

- Basic concepts:
 - Analysis of user requirements.
 - Life cycle.
 - The problem of integration of data sources.
 - OLTP transactions vs. OLAP.
- The architecture of data warehouses:
 - Conceptual, logical and physical design.
 - ETL process.
- Commercial systems.

2. Introduction to data mining:

- Knowledge and data discovery.
- Web mining.
- Tools for data mining.
- Application fields, such as:
 - Decision making (Banks-financing-insurance, marketing, health/demographic policies, etc.).
 - Industrial processes.
 - Reverse Engineering.

4.4.Course planning and calendar

The calendar of classes, lab sessions and exams, as well as the dates of delivery of evaluation assignments, will be announced in advance, according to the sessions and dates established by the School.

4.5.Bibliography and recommended resources

[BB: Basic bibliography / BC: Complementary bibliography]
