

30722 - Architectural Composition 3

Syllabus Information

Academic Year: 2019/20

Subject: 30722 - Architectural Composition 3

Faculty / School: 110 -

Degree: 470 - Bachelor's Degree in Architecture Studies

ECTS: 6.0

Year: 3

Semester: First semester

Subject Type: Compulsory

Module: ---

1.General information

1.1.Aims of the course

1.2.Context and importance of this course in the degree

1.3.Recommendations to take this course

2.Learning goals

2.1.Competences

2.2.Learning goals

2.3.Importance of learning goals

3.Assessment (1st and 2nd call)

3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

4.Methodology, learning tasks, syllabus and resources

4.1.Methodological overview

This programme offers an analytical overview of the historical development of architecture, presented as an instrument of learning and point of departure for the architect's work, in the belief that an awareness and appreciation of the past will instruct the students in a better understanding of the present and the future.

This course doesn't simply aim at increasing the student's store of knowledge but to engage in a series of activities (study trips, guest lectures and the discussion of critical texts) that will foster their ability to formulate questions and provide them with the necessary tools for tackling high level research. It is our belief that the close study of the theories and practice of architects whose work is universally regarded as having won a place in the halcyon of the history of architecture is an essential component of an architect's training, providing as it does a cultural background against which to gain a perspective of their own work. We believe that being versed in a wide spectrum of references as well as scale, volume, form and materials, equips students with the indispensable skills for critical reflection on matters such as typology, urban solutions, levels of language, semantics and project methodologies, among others.

The purpose of the programme is to equip students with a solid practical and theoretical knowledge that will enhance their interpretative and critical capabilities and prove invaluable in their future development as architects.

4.2.Learning tasks

Lectures on theory are taught in lecture rooms, whereas seminars, workshops and ?crits? take place in smaller groups in seminar rooms through tutorials and individual teaching. Visiting scholars, lecturers and study trips complete the programme

of study.

1. LECTURES. Attendance to lectures is strongly recommended

2. SEMINARS. Attendance to lectures is strongly recommended. Seminars are two hours per week. The class is divided in groups of no more than 25 students each. Each section of the course is supported by a seminar to discuss the main works and theoretical writings of the period.

3. OFFICE HOURS. The teachers will have six hours per week of office hours in order to solve the doubts that the students could have. In any case office hours could be used as a substitute for the lectures or the seminars.

4. EXCURSIONS AND TRIPS. An excursion to visit building related with the program could be scheduled during the semester.

5. VOLUNTARY ESSAYS. The students have the possibility to write short essays (should be 1.000 words long) to increase their grade.

6. MID-TERM EXAM will cover the topics explained in the first part of the course and the required readings.

7. FINAL EXAM will cover the topics explained in the second part of the course and the required readings.

MOODLE will be use to update the readings recommended during the course as well as to post grades and further readings. Student should check MOODLE every week.

4.3.Syllabus

Contents:

Course presentation

The turn of the century
