

# 28901 - Physics I

## Syllabus Information

---

**Academic Year:** 2020/21

**Subject:** 28901 - Physics I

**Faculty / School:** 201 - Escuela Politécnica Superior

**Degree:** 583 - Degree in Rural and Agri-Food Engineering  
437 - Degree in Rural and Agri-Food Engineering

**ECTS:** 6.0

**Year:** 1

**Semester:** First semester

**Subject Type:** Basic Education

**Module:** ---

## 1.General information

### 1.1.Aims of the course

### 1.2.Context and importance of this course in the degree

### 1.3.Recommendations to take this course

## 2.Learning goals

### 2.1.Competences

### 2.2.Learning goals

### 2.3.Importance of learning goals

## 3.Assessment (1st and 2nd call)

### 3.1.Assessment tasks (description of tasks, marking system and assessment criteria)

## 4.Methodology, learning tasks, syllabus and resources

### 4.1.Methodological overview

The learning process used in this subject is based on the following methodology:

- **Interactive exposition** combining an expositive and a demonstrative method. All the contents explained in the theory classroom will be complemented by the problem-solving. It offers students opportunities to test their ideas and opinions against the ideas and opinions of their peers.
- **Cooperative working** in the laboratory sessions.
- **Autonomous work** of the student, especially regarding the study and comprehension of the theoretical concepts and problem-solving.

### 4.2.Learning tasks

The learning process designed for this subject is based on the following activities:

- **Lectures**, including exposure of the theory and **problems resolution**. Students will have the content of each lecture as well as the collection of numerical exercises at the beginning of each session.
- **Laboratory sessions**, that include the presentation of the report elaborated from the results obtained. These laboratory sessions will take 2 hours, approximately every 15 days. Students will have the content before the

session, which includes the practical procedure and the theoretical contents.

- **Individualized tutoring** will monitor the learning process development.

#### 4.3.Syllabus

The course will address the following topics:

- UNIT I: STATICS
  - Topic I.1. Introduction to vector calculation.
  - Topic I.2 Introduction to Mechanics.
  - Topic I.3 Statics of the particle. Equilibrium of the rigid solid.
  - Topic I.4. Shared forces: centres of gravity and moments of inertia of areas.
  - Topic I.5. Analysis of structures.
  - Topic I.6. Dry friction.
- UNIT II: DYNAMICS
  - Topic II.1. Kinematics of particles.
  - Topic II.2. Kinetics of particles. Method of the energy of moments.
  - Topic II.3. Dynamics of rotation of the rigid solid.
- UNIT III: MECHANICS OF SOLIDS AND FLUIDS
  - Topic III.1. Elasticity.
  - Topic III.2. Statics of fluids.
  - Topic III.3. Dynamics of fluids.

#### Programme of practicals

- Practical 1.- Statics
- Practical 2.- The simple pendulum and the torsion pendulum
- Practical 3.- Elasticity: Hooke's Law and Young's modulus
- Practical 4.- Measurement of densities and viscosities
- Practical 5.- Physical properties of liquids

#### 4.4.Course planning and calendar

It is estimated that an average student should devote to this subject, 6 ECTS, a total of 150 hours. This time must include both classroom and non-attendance activities. The student must ensure that the dedication is distributed evenly throughout the quarter.

Type	1	2	3	4	5	6 <sup>(1)</sup>	7	8	9	10 <sup>(2)</sup>	11	12	13	14	15	16	17	18	19	:
Activity/week
