

Academic Year/course: 2021/22

27037 - Mathematical Astronomy

Syllabus Information

Academic Year: 2021/22

Subject: 27037 - Astronomía matemática

Faculty / School: 100 - Facultad de Ciencias

Degree: 453 - Degree in Mathematics

ECTS: 6.0

Year: 4

Semester: First semester

Subject Type: Optional

Module:

1. General information

2. Learning goals

3. Assessment (1st and 2nd call)

4. Methodology, learning tasks, syllabus and resources

4.1. Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. A wide range of teaching and learning tasks are implemented, such as lectures, practice sessions and autonomous work and study.

4.2. Learning tasks

This course is organized as follows:

- **Lectures.** Theoretical contents will be explained by the teacher.
- **Practice sessions** with oral discussion of proposed problems whose solution the students should previously have handed in.
- **Autonomous work and study.** Problems proposed for personal work

In principle, teaching activities and students' performance assessment will take place in a conventional face-to-face learning mode, except in the case that (due to the health situation) new, unexpected, administrative regulations issued by the competent governmental, regional or academic authorities might compel us to resort to some telematic environment to carry out such activities.

4.3. Syllabus

This course will address the following topics:

- **Topic 1.** Space and time reference frames. Astronomical coordinate systems.
- **Topic 2.** Two-body problem. Keplerian motion.
- **Topic 3.** Artificial satellite orbits.

4.4. Course planning and calendar

Further information concerning the timetable, classroom, office hours, assessment dates and other details regarding this course will be provided on the first day of class or please refer to the Faculty of Sciences website and Moodle.

4.5. Bibliography and recommended resources
