

Academic Year/course: 2021/22

28918 - Strength of materials and structural analysis

Syllabus Information

Academic Year: 2021/22

Subject: 28918 - Resistencia de materiales y cálculo de estructuras

Faculty / School: 201 - Escuela Politécnica Superior

Degree: 583 - Degree in Rural and Agri-Food Engineering

ECTS: 6.0

Year: 2

Semester: Second semester

Subject Type: Compulsory

Module:

1. General information

2. Learning goals

3. Assessment (1st and 2nd call)

4. Methodology, learning tasks, syllabus and resources

4.1. Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. A wide range of teaching and learning tasks are implemented, such as:

- Lectures,
- Problem-solving Sessions,
- Computer lab sessions and
- Practical sessions.

4.2. Learning tasks

The course includes the following learning tasks:

- Lectures. The teacher explains the theoretical content of each session. One of the objectives of this activity will be the promoting of the participation of the students and cooperative learning.
- Problem-solving sessions. Students, working individually or in groups, gain knowledge and skills by working to respond to problems and questions. A report of the problems resolved by students will be required.
- Computer lab sessions. Students use specific structural calculation software.
- Practical sessions. Students, working in groups, gain knowledge about the testing of materials and the analysis of deformations of structural elements under different load cases.

4.3. Syllabus

The course will address the following topics:

Theory

SECTION 0. PRESENTATION OF THE SUBJECT

0. Presentation, methodology and system of evaluation.

SECTION 1. INTRODUCTION TO MATERIAL STRENGTHS AND CALCULATION OF STRUCTURES

1. Basic concepts of statics

SECTION 2. MATERIAL STRENGTHS

- 2. Simple traction and compression below the elastic limit.
- 3. Coplanar tensions. Principal tensions.
- 4. Bending: cutting forces (V) and bending moments (M)
- 5. Bending: normal tensions due to bending moment
- 6. Bending: cutting tensions due to the cutting force V
- 7. Bending: deformations caused by the bending moment
- 8. Bending: static indetermination in bending. Continuous beams
- 9. Diverted bending and compound bending
- 10. Flexo-compression or bulging
- 11. Torsion and combined forces.

SECTION 3. CALCULATION OF STRUCTURES OF BARS

- 12. Methods of calculation for articulated plane systems. Trusses.
- 13. Methods of calculating statically indeterminate bar structures

Practicals

PRACTICAL 1. DEFORMATION IN BEAMS BY SIMPLE BENDING

- a) Deformation in bi-supported beams, beams of two materials.
- b) Deformation in supported/ built-in beams, beams of two materials.
- c) Deformation in built-in beams, beams of two materials.

PRACTICAL 2. DEFORMATION IN DEMAND BEAMS BY DIVERTED BENDING

- a) Deformation in a beam built into a ledge

PRACTICAL 3. DEFORMATION IN PLANE PORTICOS

Arrow in the middle of a girder and rotation on the head of a bi-supported portico, situations of point load in the middle of a girder and horizontal point load on the head of the pillar.

Arrow in the middle of a girder and rotation on the head of a built-in portico, situations of point load in the middle of a girder and horizontal point load on the head of the pillar.

4.4. Course planning and calendar

Type of activity/ Week	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
