

Academic Year/course: 2022/23

25224 - Water pollution

Syllabus Information

Academic Year: 2022/23

Subject: 25224 - Water pollution

Faculty / School: 201 - Escuela Politécnica Superior

Degree: 571 - Degree in Environmental Sciences

ECTS: 6.0

Year: 3

Semester: First Four-month period

Subject Type: Compulsory

Module:

1. General information

2. Learning goals

3. Assessment (1st and 2nd call)

4. Methodology, learning tasks, syllabus and resources

4.1. Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. Students will work with environmental pollution so they can acquire the habits and skills necessary for planning and develop a strategy to control water pollution from a technical point of view. A wide range of teaching and learning tasks are implemented, such as lectures, practice sessions, seminars, fieldwork, autonomous work and study.

Throughout the course, learning activities related to sustainable development goal 6 (Clean water and sanitation) and 12 (Responsible production and consumption) will be developed.

4.2. Learning tasks

This course is organized as follows:

- **Lectures** (30 hours)
- **Practice sessions** (20 hours). Laboratory and a Comprehensive Practical Assignment.
- **Seminars** (5 hours)
- **Fieldwork** (5 hours). Visits to water treatment facilities
- **Autonomous work and study** (86 hours)

In relation to the SDGs, all the learning activities of the subject allow the achievement of the learning outcomes related to the SDGs.

4.3. Syllabus

This course will address the following topics:

Lectures

Section 1. Introduction to the quality and pollution of water

- Topic O. Sustainable development goals related to the subject.

- Topic 1. General concepts about the quality and pollution of water.
- Topic 2. Water pollutants. Types of pollutants. Origin and effects of the pollutants. Main polluting sectors. Characterizing the pollution present in sewage and natural water. Physicochemical parameters and biological indicators.
- Topic 3. Evolution of pollutants in the receiving environment
- Topic 4. Basic legislation regarding water. Quality standards.

Section 2. Water treatment technology

- Topic 1. General concept about water treatment technologies. Classification of treatments. Water treatment installations: treatment, purification, regeneration.
- Topic 2. Homogeneization chambers
- Topic 3. Techniques for the elimination of thick solids, sedimentable solids and fats. Roughing down and removal of sand and grease.
- Topic 4. Techniques for the elimination of suspended or colloidal. Matter. Coagulation, flocculation, decanting, flotation and filtration.
- Topic 5. Techniques for eliminating biodegradable matter. Biological treatments, dispersed phase and fixed phase.
- Topic 6. Techniques for the elimination of sludge.
- Topic 7. Techniques for the elimination of non-biodegradable matter. Eliminating dangerous substances: neutralization, adsorption, oxidation, reduction, stripping.
- Topic 8. Water treatment for water with resin and membrane process: Osmosis, Nanofiltration, Ultrafiltration, Microfiltration, Electrodialysis.
- Topic 9. Disinfection treatments: chlorination, ozonization, UV light.
- Topic 10. Low-cost technologies.

Practice sessions

The topics of the practices of the course are summarized as follows:

- Characterization of wastewater and treated water by means of indicator parameters.
- Potabilization of natural waters.
- Evaluation of organic pollution present in domestic wastewater: determination of COD, BOD5 and TOC.
- Purification treatment of a chrome plating industry: chromium removal by coagulation-flocculation.
- Removal of pollutants in water by advanced oxidation processes.
- Initiation, follow-up, presentation and defense of the Integral Practical Work.

4.4. Course planning and calendar

Schedule sessions and presentation of assignments:

Activity/Week	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
<i>Class activity</i>																
Lectures	1	2	2	2	2	2	2	2	2	2	2	2		2	2	
Simulation sessions and seminars		2									2	2		1	2	
Lab sessions			2	2	2	2	2	2	2	2						
Visits														5		
Evaluation																
<i>Autonomous work and study</i>																
Individual work	1	3	3	3	3	3	3	3	3	3	3	3	4	1	2	7
Collective work		1	1	1	1	1	1	2	2	2	2	1	4	1	2	
TOTAL	2	8	8	8	8	8	8	9	9	9	9	8	8	10	8	7

Further information concerning the timetable, classroom, office hours, assessment dates and other details regarding this course will be provided on the first day of class or please refer to the Faculty of Sciences website and Moodle.

4.5. Bibliography and recommended resources

- BB** Calidad y tratamiento del agua : manual de suministros de agua comunitaria / American Water Works Association. Madrid [etc.] : McGraw Hill, D.L. 2002
- BB** Ingeniería de aguas residuales : tratamiento, vertido y reutilización / Metcalf and Eddy ; revisado por George Tchobanoglous, Franklin L. Burton ; traducción y revisión técnica, Juan de Dios Trillo Montsoriu, Ian Trillo Fox ; prólogo de Angel Cajigas. 3a. ed., [reimpr.]. Madrid [etc.] : McGraw-Hill, D.L. 2000
- BB** Marín Galvín, R. Físicoquímica y microbiología de los medios acuáticos: tratamiento y control de calidad de aguas. Madrid : Díaz de Santos, 2020
- BB** Nemerow, Nelson Leonard. Tratamiento de vertidos industriales y peligrosos / Nelson Leonard Nemerow, Avijit Dasgupta Madrid : Díaz de Santos, D.L. 1998
