

Academic Year/course: 2022/23

29723 - Machine Design Criteria

Syllabus Information

Academic Year: 2022/23

Subject: 29723 - Machine Design Criteria

Faculty / School: 110 - Escuela de Ingeniería y Arquitectura

Degree: 330 - Complementos de formación Máster/Doctorado
434 - Bachelor's Degree in Mechanical Engineering

ECTS: 6.0

Year: 434 - Bachelor's Degree in Mechanical Engineering: 3
330 - Complementos de formación Máster/Doctorado: XX

Semester: First semester

Subject Type: 434 - Compulsory

330 - ENG/Complementos de Formación

Module:

1. General information

2. Learning goals

3. Assessment (1st and 2nd call)

4. Methodology, learning tasks, syllabus and resources

4.1. Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. It is based on participation and the active role of the student favours the development of communication and decision-making skills. A wide range of teaching and learning tasks are implemented, such as lectures, guided assignments, laboratory sessions, autonomous work, and tutorials.

Students are expected to participate actively in the class throughout the semester.

Classroom materials will be available via Moodle. These include a repository of the lecture notes used in class, the course syllabus, as well as other course-specific learning materials.

Further information regarding the course will be provided on the first day of class.

4.2. Learning tasks

The course includes 6 ECTS organized according to:

- Lectures (1.8 ECTS): 45 hours.
- Laboratory sessions and problem-solving activities (0.6 ECTS): 15 hours.
- Guided assignments (0.8 ECTS): 20 hours.
- Autonomous work (2.6 ECTS): 65 hours.
- Tutorials (0.2 ECTS): 5 hours.

Lectures: the professor will explain the theoretical contents of the course and solve illustrative applied problems. These problems and exercises can be found in the problem set provided at the beginning of the semester. Lectures run for 3 weekly hours. Although it is not a mandatory activity, regular attendance is highly recommended.

Laboratory sessions and problem-solving activities: sessions will take place every 2 weeks (5 sessions in total, 3 hours each). Students will work together in groups actively doing tasks such as practical demonstrations, measurements, calculations, and the use of graphical and analytical methods.

Guided assignments: students will complete assignments, problems and exercises related to concepts seen in laboratory sessions and lectures. The dates of delivery of each guided assignments will be indicated in the course guide. If assignments are submitted later, students will not be able to take the assessment test.

Autonomous work: students are expected to spend about 60 hours to study theory, solve problems, prepare lab sessions, and take exams.

Tutorials: the professor's office hours will be posted on Moodle and the degree website to assist students with questions and doubts. It is beneficial for the student to come with clear and specific questions.

4.3. Syllabus

The course will address the following topics:

- Introduction to mechanical design.
- Calculation of actuating systems in machines.
- Materials used in machines and their properties
- Stress analysis in machine components.
- Design for static stress.
- Rigidity and deformation.
- Stress and strain on cylinders.
- Bolted joints.
- Pressure unions.
- Welded joints.

4.4. Course planning and calendar

For further details concerning the timetable, classroom and further information regarding this course please refer to the *Escuela de Ingeniería y Arquitectura* website (<https://eina.unizar.es/>)
