

30807 - Biochemistry

Syllabus Information

Academic Year: 2022/23

Subject: 30807 - Biochemistry

Faculty / School: 105 - Facultad de Veterinaria

Degree: 568 - Degree in Food Science and Technology

ECTS: 6.0

Year: 1

Semester: Second semester

Subject Type: Basic Education

Module:

1. General information

1.1. Aims of the course

The degree aims, among others, to make available to the food industry technicians qualified to address both quality control departments, as the production. The discipline of Biochemistry is a matter of basic training, which is essential for the basic knowledge of the structure of biomolecules, metabolic reactions of synthesis and processing, obtaining energy and the molecular basis of heredity, as well as all regulatory mechanisms. Obtaining these principles is important for the knowledge of the components of food and its transformation during processing and storage thereof. Consequently, the general objective of this course is to instill in students the basics of all biological molecules in subsequent subjects will be applied to the study of changes that may occur during processing as food.

These approaches and objectives are aligned with the following Sustainable Development Goals (SDGs) of the United Nations 2030 Agenda (<https://www.un.org/sustainabledevelopment/es/>), in such a way that the acquisition of the results of learning of the subject provides training and competence to contribute to some extent to its achievement: Objective 3: Health and well-being; Objective 14: Underwater life; Objective 15: Life of terrestrial ecosystems.

1.2. Context and importance of this course in the degree

Due to the basic character of this subject, overcoming this discipline should enable students to track other specific subjects of the degree.

1.3. Recommendations to take this course

In order to fully understand the contents of the program to be described later, it is recommended that secondary school students have studied the subjects of Biology and Chemistry, with emphasis on organic chemistry.

2. Learning goals

2.1. Competences

. To pass the course, students will be more competent to ...

CG1 Manage information, search for sources, collection and analysis of information, etc.

CG2 Use ICTs.

Teaming CG3.

CG4 think and reason critically.

CG5 Work independently and perform a self-evaluation.

CG6 Respecting the diversity and plurality of ideas, people and situations.

CG7 transmit information orally and in writing both in Castilian and English.

CG9 negotiate with both specialists in the area as non-experts in the field people.

CG10 Adapt to new situations and solve problems.

CB1 That students have demonstrated knowledge and understanding in a field of study that part of the basis of general secondary education, and is typically at a level which, although it is supported by advanced textbooks, includes some aspects that imply knowledge of the forefront of their field of study.

CB2 That students can apply their knowledge to their work or vocation in a professional manner and have competences

typically demonstrated through devising and defending arguments and solving problems within their field of study.
 CB3 That students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical.
 CB4 That students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences.
 CB5 That students have developed those skills needed to undertake further studies with a high degree of autonomy.

2.2. Learning goals

The student, for passing this subject, must demonstrate that ...

- 1- Is able to identify and understand the structure of biomolecules, metabolic transformation reactions and synthesis of these biomolecules and regulatory mechanisms.
- 2- they know the mechanisms of obtaining metabolic energy.
- 3- they know the molecular basis of heredity.
- 4- is able to manage in a biochemical laboratory and perform the most basic biochemical techniques.
- 5- is able to use basic Internet tools for bioinformatics applications in Castilian and English.

2.3. Importance of learning goals

They contribute, along with other skills acquired in the subjects of Biology, Chemistry and Physiology, at training students for management in all basic biological aspects and with later application in the professional profile that develop in meat industries, dairy, fish, fruit and vegetables, oil, sugar, cereal products, beverages, delicatessen, production of food ingredients, additives, etc.

They also contribute, along with other disciplinary matters, to train students to perform professional profiles of Graduate in Science and Food Technology

3. Assessment (1st and 2nd call)

3.1. Assessment tasks (description of tasks, marking system and assessment criteria)

The student must demonstrate that it has achieved the intended learning outcomes through the following evaluation activities

Global test

1) Final evaluation written test. A final exam will be held in the first call (June) (blocks I to III) of the program that will consist of 50 multiple choice questions. To pass it you will have to get a score of 30 (5 on the scale of 0 to 10). The second call exam will consist of a single final exam, like the one from the first call.

Passing this test will credit the achievement of learning outcomes 1, 2 and 3 and will be evaluated using the following criteria and levels of demand. The rating is from 0 to 10 and this rating will mean 80% of the student's final grade in the course.

2) Evaluation of practical work. The acquisition of skills and abilities while performing practices will be assessed by continuous observation of student work and correction of documents generated in each practice, or alternatively, for those students who have not attended all practices, through a laboratory test coinciding with the celebration of the global test. In addition, all the students will have to pass a test exam consistent in 10 test questions that will be convened to coincide with the partial or global test. To pass the exam they must get a score of 6 correct questions (5 in the scale of 0 to 10). Passing this test will credit the achievement of learning outcome 4 and will be evaluated using the following criteria and levels of demand. The rating is from 0 to 10 and this rating will represent 10% of the student's final grade.

3) Evaluation of management capacity of bioinformatics with the presentation of tutored projects. Passing this test will credit the achievement of learning outcome 5, They will be evaluated using the following criteria and levels of demand. The rating is from 0 to 10. This rating will represent 10% of the student's final grade in the course. The evaluation will coincide with the final test and additionally after completing the practical teaching according to the teaching program of the current course.

2.2. Endpoints and demand levels

1) Written partial and final evaluation test: must be obtained 60% of correct answers (6 of 10). The average final grade represent 80% of the course grade.

2) Written resolution of issues related to the practical work that have developed in the laboratory test. You must be obtained 60% of correct answers (minimum score of 0.6 on 1). Students who have not attended all practices will be invited to an assessment in the biochemistry laboratory in which will be necessary to perform a practical demonstration of their skills in the biochemistry laboratory.

3) Evaluation of the presentation of the tutored projects. synthesis capacity and relevance of the content will be valued. The qualification obtained will will be the final one. It will be necessary to pass the tests 2 corresponding to teaching practical to take the final exam.

Those students who, having passed the evaluation of laboratory practices, have to appear in successive calls for not having passed the subject on first call, they keep the score obtained in practical work.

Ratings System: According to the Regulations Evaluation Standards of Learning at the University of Zaragoza (Agreement Governing Council of 22 December 2010), the results obtained by the student will be graded according to the following numerical scale 0 to 10, with one decimal, which may be added corresponding qualitative rating:

0	to	4.9 :	S u s p e n s e	(S S) .
5.0	to	6.9 :	A p p r o v e d	(A P) .

7.0
9.0

to
to

8.9:
10:

Notable
Outstanding

(NT).
(SB).

The mention of 'honors' may be awarded to students who have achieved a score equal to or greater than 9.0. Their number may not exceed five percent of the students enrolled in the corresponding academic year.

4. Methodology, learning tasks, syllabus and resources

4.1. Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. A wide range of teaching and learning tasks are implemented, such as: 45 participatory lectures, 10 hours of practice in the laboratory of Biochemistry, 5 hours and conducting seminars and presentation of a protected work.

Regarding participatory lectures, it is scheduled to deliver the documentation for each subject at least 1 week before the start of explanation of each section so that the student review it in detail before the corresponding class. In principle, it is planned to spend 5 minutes a review of the previous class in order to place students in the later explanation, with 45 minutes exposure of the most important and / or difficult aspects. It will emphasize the need to interrupt the teacher when they see fit to solve problems as they arise during the exhibition.

The seminars will be organized in sessions of two hours and they will progressively working students different problems of Biochemistry in order to achieve the learning outcome 1, 2 and 3.

Practice sessions are held in sessions of 2 hours for each group of 15 students. It is envisaged that each session the group to split into two subgroups of students perform different activities simultaneously for the best use of the laboratory. Each group is expected to complete a practice week. At the end of the practical test on the same test is performed.

Tutored work will be done in groups of 3-4 students and will be related to the handling of applications relating to the field of study and use of the Internet as a means of communication and source of information. All necessary for carrying out this activity material is in English.

Students must follow the regulations described in:

- Prevention: A guide for students at the University of Zaragoza:
https://uprl.unizar.es/sites/uprl.unizar.es/files/archivos/Procedimientos/guia_preventiva_para_estudiantes.pdf
- Manual de seguridad en los laboratorios de la Universidad de Zaragoza y normas marcadas por la Unidad de Prevención de Riesgos Laborales:

https://uprl.unizar.es/sites/uprl.unizar.es/files/archivos/Procedimientos/manual_de_seguridad_en_los_laboratorios_de_la
<https://uprl.unizar.es/inicio/manual-de-procedimientos>

In addition, students will follow as well any instructions related to biosecurity given by the professor

4.2. Learning tasks

The course includes the following learning tasks:

- Lectures: 45 hours.
- Practice session: Laboratory classes: 10 hours.
- Seminars: 5 hours.
- Autonomous work: 68 hours of study.

4.3. Syllabus

The course will address the following topics:

SECTION I.- AMINO ACIDS. PROTEINS AND ENZYMES.

Lectures:

The topics included in this first Section are devoted to the study of the structure and properties of amino acids and the proteins they give rise to. The structure-function relationship and the type of molecular forces involved in its production are highlighted. Enzymes, their mode of operation and regulation are explained.

1. Amino acids. Structure and properties of amino acids.
2. Proteins. The peptide bond. Protein conformation. Intramolecular forces. Primary, secondary, tertiary and quaternary structures.
3. Enzymes. Basic concepts. Chemical reactions and free energy. Nomenclature and classification.

Vitamins and cofactors. Properties. Enzyme-Substrate Complex. Active center. Transition state. Binding energy. Basic catalytic principles.

4. Enzymes. Regulation of enzyme activity. Allosterism. Isoenzymes. Covalent modification. Proteolytic activation.

Practice Sessions:

1. Quantitative determination of proteins. Protein electrophoresis.
2. Determination of enzyme activity

Teaching-learning activities:

- Lecture: 12 hours of lectures.
- Practice Sessions: 4 h
- Autonomous work of the student: 18 h of study.

SECTION II.- FLOW OF GENETIC INFORMATION.

Lectures:

This Section analyzes the structure of nucleic acids and how genetic information is stored and expressed through the processes of replication, transcription and translation. In addition, the mechanisms of regulation of gene expression are studied.

1. DNA. DNA structure. DNA replication. DNA polymerases and other enzymes involved. Telomeres. Recombination. Mutations and DNA repair.
2. RNA Structure. RNA types: mRNA, rRNA, tRNA. RNA transcription. RNA polymerases and other enzymes involved. RNA processing and maturation. Promoters and regulation.
3. Protein. The genetic code. Role of mRNA, rRNA, tRNA, ribosomes and other enzymes involved in translation. Activation of the amino acid. Phases of the translation: initiation, elongation, termination. Inhibition of translation.
4. Control of gene expression in eukaryotes. Chromatin structure. Chromatin remodeling. Organization of genes in eukaryotes. Regulation of transcription and translation.
5. Mitochondrial genetic system. Mitochondrial DNA. Replication, transcription and mitochondrial translation. Synthesis and amount of mitochondrial proteins encoded in the nucleus.

Practice Sessions:

1. DNA preparation
2. DNA manipulation. PCR amplification and restriction enzyme digestion.

Teaching-learning activities:

- Lectures: 9 hours of master classes.
- Practice Sessions: 4 h
- Autonomous work of the student: 13.5 hours of study.

Section III.- METABOLISM.

Lectures:

This last Section is dedicated to intermediary metabolism. The catabolic pathway
CARBOHYDRATE METABOLISM AND ENERGY CONTRIBUTION

1. Carbohydrates. Monosaccharides. Structures. Variation. Reactions. Disaccharid
2. Glycolysis and gluconeogenesis. General aspects of glycolysis. Glucose uptake

3. Citric acid cycle. Mitochondria. Pyruvate entrance to the mitochondria. Oxidative phosphorylation system. Electron transport chain. Structure and function.
4. Oxidative phosphorylation system. Electron transport chain. Structure and function.
5. Photosynthesis and assimilation of CO₂. Chloroplast. Photosynthetic pigments.
6. The pentose phosphate route. General characteristics. Oxidative phase. Interconversion of glucose and glycogen.
7. Glycogen metabolism. Glycogen breakdown. Regulation of glycogenolysis. Glycogenesis.

LIPID METABOLISM

8. Lipids: structure. Fatty acids. Neutral fats. Membrane lipids. Sterols.
9. Lipids: metabolism. Lipid absorption. Plasma transport. Lipolysis. Activation of lipolysis.

METABOLISM OF AMINO ACIDS AND NITROGEN COMPOUNDS

10. Catabolism of proteins. Diet proteins and protein turnover. Proteasome. Transamination.
11. Biosynthesis of amino acids. Nitrogen fixation. Precursors of the carbon chain.
12. Nucleotides. Nucleotide catabolism. Nucleotide synthesis. De novo synthesis.

Practice Sessions:

1. Determination of cholesterol and glycogen in food

-

Teaching and learning activities:

- Lectures: 24 hours of lectures.
- Practice Sessions: 2 hours
- Work autonomous of the student: 36,5 hours of study.

Summary table of teaching-learning activities:

Activity	HOURS	FACTOR	ACTIVITIES OUTSIDE THE CLASSROOM	TOTAL
THEORY	45	1,5	67,5	112,5
SEMINARS	5	0,5	2,5	7,5
PRACTICAL WORK	10	0,5	5	15
PRACTICAL WORK			12	12
TUTORIAL			0	0
EXAMS WEEK			3 SEMINARS. EVALUATIONS	3
Total	60	PRACTICAL WORK	90	150
		WORK		
1	Block I (3h)			
2	Block I (3h)	L. P1. G1 M. P1. G2 Mi. P1. G3 J. P1. G4 V. P1. G5		

4.4. Course planning and calendar

The tentative schedule of the subject is shown below. This time schedule is subject to modification by the center.

ACTIVITIES OUTSIDE THE CLASSROOM. TUTORED WORK.

3	Block I (3h)	L. P2. G1 M. P2. G2 Mi. P2. G3 J. P2. G4 V. P2. G5		
4	Block (3h)	L. P3. G1 M. P3. G2 Mi. P3. G3 J. P3. G4 V. P3. G5		
5	Block II (3h)	L. P4. G1 M. P4. G2 Mi. P4. G3 J. P4. G4 V. P4. G5		
6	Block II (3h)		Practical work evaluation.G1,2,3,4,5	
7	Block II (3h)			Approach Problems 1
8	Block III (3h)		Partial and practical work exam (1 h.)	
9	Block III (3h)			
10	Block III (3h)			Approach Problems Resolution 1 Approach Problems 2
11	Block III (4h)			
12	Block III (4h)			Approach Problems resolution 2
13	Block III (4h)
