

Academic Year/course: 2022/23

## 69200 - Technique and Subject: Generation of the Project and Rehabilitation

### Syllabus Information

**Academic Year:** 2022/23

**Subject:** 69200 - Technique and Subject: Generation of the Project and Rehabilitation

**Faculty / School:** 110 - Escuela de Ingeniería y Arquitectura

**Degree:** 519 - Master's in Architecture

**ECTS:** 6.0

**Year:** 1

**Semester:** First semester

**Subject Type:** Compulsory

**Module:**

## 1. General information

## 2. Learning goals

## 3. Assessment (1st and 2nd call)

### 3.1. Assessment tasks (description of tasks, marking system and assessment criteria)

The student is evaluated through a practical exercise carried out partially in group and partially individually throughout the course. There will be pre-deliveries and final delivery of the practical exercise. The evaluation of each part in the final grade will be:

- Predeliveries of the practical exercise: 20%, which will be developed in group.
- Final delivery of the practical exercise: 80%, which will have a part of the work done in group and a part individually. The weight on the final grade of the part done in group will be of 40% and the weight of the part done individually will be of 40%.

The conditions to pass the subject are:

- Make all the pre-deliveries, delivery and public presentation of the practical exercises on the dates announced.
- Obtain at least 5 in the final delivery of the practical exercise.
- Obtain at least a 5 of global mark in the subject.

The mark will be calculated from the following equation:

$$A = 0.2 \cdot P + 0.80 \cdot E$$

Where:

A is the global grade out of 10

P is the pre-deliveries grade out of 10

E is the final delivery grade out of 10

If E or the mean of E and P grades below 5, students have the option to pass the course improving the final delivery or taking a theoretical-practical test, in both calls, January and July.

If a student does not undertake all the activities, pre-deliveries and / or public exhibitions on the agreed dates, the subject can only be passed by taking a theoretical-practical test at the end of the semester or in the next call.

Students who take the theoretical-practical test will pass the subject if they get more than a 5 in this test.

## 4. Methodology, learning tasks, syllabus and resources

### 4.1. Methodological overview

The methodology followed in this course is oriented towards achievement of the learning objectives. A wide range of teaching and learning tasks are implemented, such as lectures where students learn about building renovation and extension, theory sessions, practice sessions, tutorials, and continuous and autonomous work.

At least one visit to the site of the practical exercise will be carried out. Visits to conferences may also be considered.

### 4.2. Learning tasks

The course (6 ECTS: 150 hours) includes the following learning tasks:

- Lectures and theory sessions (3 ECTS: 75 hours).
- Practice sessions (3 ECTS: 75 hours). They include coursework revision, visits and the public presentation of the project results.

### 4.3. Syllabus

The course will address the following topics:

1. Major challenges of contemporary architecture and cities: energy renovation and Evidence based design.
2. The diagnosis and intervention techniques in existing buildings.
3. Energy evaluation of renovations and extensions.
4. Technical project management

### 4.4. Course planning and calendar

#### Important information

- Theory sessions, in number equivalent to 2 hours per week.
- Practice sessions, in number equivalent to 2 hours per week.
- A site visit will be scheduled and a conference visit may also be arranged.
- The exact distribution of theory, practice and visit sessions will be set by the teachers at the beginning of the course.
- The course assignment will have a partial pre-submissions and a final submission. The dates will be set by the teachers at the beginning of the course.
- The course is evaluated with a practical exercise developed during the course (with intermediate pre-delivery and a final delivery) or a theoretical test at the end of the course.

### 4.5. Bibliography and recommended resources
