

29709 - Environmental engineering

Syllabus Information

Academic year: 2023/24

Subject: 29709 - Environmental engineering

Faculty / School: 110 - Escuela de Ingeniería y Arquitectura

Degree: 330 - Complementos de formación Máster/Doctorado
434 - Bachelor's Degree in Mechanical Engineering

ECTS: 6.0

Year: 434 - Bachelor's Degree in Mechanical Engineering: 1

330 - Complementos de formación Máster/Doctorado: XX

Semester: Second semester

Subject type: 434 - Compulsory

330 - ENG/Complementos de Formación

Module:

1. General information

The main objective of this subject is to provide students with the scientific and technical knowledge that will enable them to identify and control water, air and soil pollution, providing them with quality training in the field of environmental assessment, management and planning environmental, all aimed at protecting health and the environment. The student will acquire training in minimization techniques or measures and treatment technologies, especially in the industrial sector.

These approaches and objectives are closely aligned with the Sustainable Development Goals (SDGs) of the 2030 Agenda (<https://www.un.org/sustainabledevelopment/es/>) and certain specific targets, such as: Targets 6.3, 6.4 and 6.6 of Goal 6, Target 9.4 of Goal 9 and Targets 12.2, 12.4, 12.5, 12.6 and 12.8 of Goal 12.

2. Learning results

- Recognize the pollutants that can be generated and their effect or impact on the receiving environment (atmosphere, water and soil).
- Analyze an industrial activity and identify the environmental problems it may generate.
- Plan a pollution prevention and control strategy in specific cases, in water, air and waste, at a basic level.
- Selecting the most appropriate technique for purification and/or pollution control in specific cases, as well as sizing effluent treatment facilities
- To know the basic regulations related to environmental matters: discharges, atmosphere, waste, environmental impact assessment, integrated pollution control.
- To know the basics of an Environmental Management System at a basic level.

3. Syllabus

Topic 0. Introduction: Current environmental problems. Agenda 2030 and Sustainable Development Goals.

Block 1. WATER POLLUTION.

Block 2. ATMOSPHERIC POLLUTION.

Block 3. WASTE POLLUTION.

Block 4. INTEGRATED ENVIRONMENTAL MANAGEMENT TOOLS

4. Academic activities

- **Participative lectures (30 hours)** Expository sessions of theoretical and practical content.
- **Problem solving classes and case studies (15 hours)** There will be exercises and/or specific practical cases of direct or complementary application to what has been covered in the lectures. They will also be used to monitor teaching work.
- **Practical laboratory and simulation classes (10 hours)** Both experimental practices in the laboratory and simulation practices will be carried out by means of the use of computer tools.
- **Teaching work (10 hours)** It will consist of a supervised practical work during the four-month period.
- **Personal study and work (80 hours)**
- **Assessment tests (5 hours)**

5. Assessment system

The subject will be assessed by the continuous assessment system by means of the following activities:

1. Laboratory practicals and simulation (15% of the grade, minimum 5 out of 10) The assessment of each practice will be done through the delivery of reports and/or written tests.

2. Practical work (15% of the grade, minimum 5 out of 10) The assessment of the work will be done through the presentation of the same in the format indicated by the teacher and/or written tests.

If the student has not passed any of these activities during the semester, they will have the opportunity to pass the subject by means of a global test in the two official exams. The grade obtained is kept for the second call of the same academic year.

3. Intermediate test (20% of the grade, minimum 5 out of 10) Individual written test on part of the contents of the subject.

4. Final test (50% of the grade, minimum 5 out of 10) Individual written test on the rest of the contents of the subject not evaluated in the midterm test.

If the student does not pass the intermediate test, the final test will consist of a written test of all the contents of the subject, which represents 70% of the final grade (minimum 5 out of 10).
