

39606 - Basic physics II

Syllabus Information

Academic year: 2024/25

Subject: 39606 - Basic physics II

Faculty / School: 175 - Escuela Universitaria Politécnica de La Almunia

Degree: 608 -

ECTS: 6.0

Year: 1

Semester: Second semester

Subject type: Basic Education

Module:

1. General information

The subject and its expected results respond to the following approach: Analyze and solve autonomously problems that integrate different aspects of physics, recognizing the various physical and technical fundamentals underlying the problem.

The development of this subject requires knowledge of:

- Physics: understanding the fundamental equations and laws of classical mechanics.
- Mathematics: mastery of the basic notions of calculus.

In summary, we recommend a level of second year of Bachillerato in both mathematics and physics to take the subject. As well as having taken and passed Mathematics I and being enrolled in or having passed Mathematics II.

2. Learning results

In order to pass this subject, the students shall demonstrate they has acquired the following results:

- Application of the basic concepts on the general laws of mechanics, thermodynamics, fields and waves; and electromagnetism.
- Use the computer as a tool to support the calculation.
- Handle the scientific and technical terminology of the subject.

3. Syllabus

The program of the subject comprises 6 topics:

- I Electrostatics
- II Dielectric capacity and electric current
- III Magnetism
- IV Electromagnetic field
- V Wave motion
- VI Optics

4. Academic activities

The course consists of 6 ECTS credits, which represents 150 hours of student work in the course during the semester. 40% of this work (60 h.) will be done in the classroom, and the rest will be autonomous.

The program offered to the student includes the following activities:

- Theoretical classes: Theoretical activities taught in a fundamentally expository manner by the professor.
- Practical classes: Practical discussion activities and exercises, carried out in the classroom, and that require a high level of student participation. The practical classes may also involve the realization of experimental practices including the use of different instruments and appropriate software.
- Group and individual tutoring. They will be scheduled according to the needs of the course.

5. Assessment system

The student must demonstrate that he/she has achieved the expected learning outcomes through the following assessment activities. There is the possibility of passing the course by two different ways:

Continuous Assessment:

To be eligible for the Continuous Assessment system, at least 80% of the classes must be attended. It will consist of two written

tests. To pass this part, a grade of 4.0 or higher on each written test is required.

The final grade for the course will be the average of both tests.

In order to pass the course, the student must obtain an average grade of 5.0 or higher.

Global Assessment:

The Global Assessment will consist of a final written test whose grade must be greater than or equal to 5.0 to pass the course.

The final grade for the course will be the grade obtained in the final written test.

The same evaluation procedure will be followed in the two global evaluation calls.

Note: in case the student does not pass the course through Continuous Assessment, he/she will be able to do it through Global Assessment . In addition, in case the student has passed the course through Continuous Assessment and wants to improve their grade, they can take the 1st call of the Global Evaluation without the risk of lowering their grade.

6. Sustainable Development Goals

5 - Gender Equality

7 - Affordable and Clean Energy
